

NAUMAN ALI

Email: nauman170462@gmail.com • Contact: +92 3324553008 • Address: Gulshan-e-ravi,Lahore
• <https://www.linkedin.com/in/nauman-ali-362155245/>

Summary

A dedicated and detail-oriented **Software Engineer** with experience in **Node JS, Nest JS, React JS, Vue Js, Express JS, Supabase, Databases** and full-stack web development. Skilled in designing and implementing scalable RESTful APIs, optimizing database performance, and integrating secure authentication mechanisms such as JWT/Guards and social media logins. Proficient in Git version control, debugging, and best coding practices.

Experience

Texagon

Gulberg,Lahore

Software Engineer

11/2025 - Present

- Designed and developed a scalable backend architecture using NestJS **modules, controllers, services, dependency injection, DTOs**, custom decorators, pipes, interceptors, and middleware following clean architecture principles.
- Implemented secure authentication and authorization with JWT access and refresh tokens, auth guards, role guards, cookies, and refresh token middleware to enforce role-based access control and secure APIs.
- Built an AI-powered Audio **RAG pipeline** with **vector embeddings** for semantic search and contextual retrieval, integrating asynchronous background processing using **Celery** and **RabbitMQ** for scalable audio ingestion, transcription, and processing workflows. (FastAPI)
- Integrated **Supabase** for database management, storage handling, file uploads via Multer, JSON/JSONB support, **edge functions & RLS**.
- Added centralized logging and monitoring using **Winston** along with global request/response logging middleware for debugging and error diagnostics.
- Integrated **Prisma ORM** with **Bun** for **type-safe database access**, schema migrations, and high-performance backend development.
- Improved scalability and API performance with **Redis caching**, queue management, and **rate limiting** mechanisms to optimize data retrieval and ensure system stability.
- Enhanced developer experience and deployment workflows by implementing **Swagger API documentation, CI/CD pipelines** using GitHub Actions, and maintaining strong TypeScript type safety across the codebase.
- Integrated **Vercel Analytics** and event tracking to monitor user interactions, custom events, page performance, and engagement metrics for data-driven product insights and optimization.

Devorbis

OPF Society,Lahore

Software Engineer

06/2024 - 10/2025

- Developed dynamic and scalable React applications using React Hooks, React Router, and **Redux Toolkit** for state management, ensuring modularity and reusability across components.
- Built reusable components using **Tailwind CSS**, implementing client-side validation with Formik and **Yup** in form components.
- Optimized API interactions using Axios interceptors for centralized error handling, **JWT** token renewal, and request/response logging.
- Implemented **code-splitting** and **lazy-loading** of routes, enhancing app performance and reducing initial load times.
- Helped develop a secure **Node.js/Express.js** backend with **Sequelize ORM**, handling **migrations** and **seeders**, and using **Joi** for input validation and sanitization.
- Designed role-based access control (RBAC) using Express middleware, ensuring secure API endpoints and structured responses.
- Enforced code quality with ESLint and Prettier, reducing linting errors by good margin and maintaining consistent style across the codebase.
- Developed dynamic and scalable **Vue.js** components using **Composition API, Vue Router, and Vuex Pinia** for efficient state management across modules.
- Maintained codebase using **Git** and conducted regular **code reviews**, ensuring maintainable and high-quality code across frontend and backend.
- Developed responsive and high-performance user interfaces using **Next.js** and shadcn/ui, leveraging **SSR, SSG, dynamic routing**.

Skills

Node JS • React JS • Express JS • Vue JS • Nest JS • ES6 • Typescript • Python • FastAPI • PHP • MYSQL • PostgreSQL • Redux Saga • Redux toolkit • API's Integration • Version Controls(Git & Github) • Material UI • CI/CD Pipelines • ESLint • Pipecat • Celery • LLM • RAG

Education

Information Technology University

Location

Bachelor in Computer Engineering-(BSCE)

2020 - 2024

Govt. Islamia College Civilines

2017 - 2019

FSc Pre-Engineering

et al. – AI-Powered Academic Research Management Platform

etal.co

Architected a server-side event tracking system using **@vercel/analytics** and **Supabase**, capturing paper uploads across all ingestion sources, drag/drop, browser extension, **URL import**, **Zotero ZIP**, and **AI agent imports**, with full **anonymous-to-authenticated** merge attribution and hashed user identity for investor-facing metrics.

Multi-Source Paper Ingestion: Built and maintained API routes handling PDF uploads from a **Chrome extension** (extension_import_pdf, extension_upload_pdf), web drag/drop (web_upload), URL-based import (landing_import), and Zotero archive imports (zotero_import_zip).

Authentication & User Management: Implemented anonymous-to-authenticated session merging with Supabase Auth, including re-attribution of upload events from anonymous to authenticated users upon sign-up.

Database Architecture: Designed paper_upload_events table in Supabase with upsert deduplication, source attribution, and anonymity flags to support reliable querying independent of third-party analytics dashboards.

Audio Intelligence & RAG Query System (AudioRAG)

Developed an end-to-end audio intelligence pipeline in **FastAPI** for speech-to-text transcription and speaker diarization using **Whisper** and **pyannote.audio**, producing structured speaker-labeled transcripts.

Implemented semantic search using **OpenAI embeddings** with **pgvector** in PostgreSQL for efficient similarity-based retrieval with metadata filtering.

Designed a **RAG-based chat system** that retrieves relevant transcript chunks and generates context-aware responses with timestamped and speaker-aware citations.

Modeled a normalized PostgreSQL schema and managed migrations using **Alembic**.

Implemented Redis-backed async background processing for audio uploads, enabling non-blocking execution and real-time job status tracking.

Incident Management & Reporting System

Developed a **full incident & report management system** using NestJS, enabling users to create, update, and track incidents with categorized reports.

Built a **scalable RESTful API architecture** leveraging NestJS modules, controllers, services, and dependency injection for clean code separation.

Integrated **Supabase (PostgreSQL)** for CRUD operations, relational data modeling, JSON/JSONB handling, and database constraint enforcement.

Implemented **secure authentication & authorization** using JWT access/refresh tokens, RBAC, custom guards, and decorators.

Added **file upload and storage management** using Multer and Supabase Storage with support for safe file replacement.

Implemented **activity logging, audit trails, and event-based notifications**, including watcher patterns and email alerts.

Enhanced system reliability with **global middleware, interceptors, validation pipes, exception filters, Winston logging, Swagger documentation, and CI/CD via GitHub Actions**.

BuzzBridge – Scalable Influencer Marketing Platform

Campaign Management: Enabled brands to post detailed campaign requirements, including platform selection (Instagram, YouTube, TikTok, X, Facebook, Kick), content type preferences, and budget specifications.

Creator Engagement: Developed features allowing creators to apply for campaigns or send tailored proposals based on their niche and audience alignment.

Modern Frontend: Built with **Vue.js** and built-in **Composition API** for state management, delivering a fast, responsive user interface optimized for both brands and creators.

Robust Backend: Engineered a secure and scalable **RESTful API using Node.js & Express.js**, ensuring efficient data flow, modular route handling, and clear separation of concerns.

Database Architecture: Designed and managed a **PostgreSQL database using Sequelize ORM**, implementing migrations, seeders, and a relational schema to ensure data integrity and scalability.

Authentication & Security: Implemented **JWT-based authentication**, safeguarding login sessions and route access based on user roles (brand or creator).

Revolutionized E-commerce Platform (Multi-tenant)

Multi-Role System: Designed separate interfaces and controls for **Admin, Super Admin, and Customers**, ensuring structured access and security.

Admin Panel: Enabled admins to manage **product catalogs, user accounts, orders, returns, and analytics**, with real-time reporting features.

User-Friendly Frontend: Built a **responsive React.js interface**, enhancing the shopping experience with **Augmented Reality (AR) features** for product visualization.

Efficient Backend: Developed a **RESTful API using Node.js & Express.js**, ensuring smooth data processing, secure user authentication, and seamless transactions.

Database Optimization: Utilized **MySQL with optimized indexing and relational design**, ensuring fast query execution and secure data storage.

Security & Performance: Implemented **JWT-based authentication** for a secure and efficient system.
